**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/EP03/09810

Ad V:

Compared to the document WO-A-0040835 as nearest prior art, which describes a cyclonic fluid separator having an acceleration section, a separation section with separate outlets and a midstream vortex generation section having wings extending from the tubular wall, claim 1 as main novel feature prescribes that the wing tips are located at a specific distance from the inner surface of the vortex generation section. This feature allows an enhancement of separation efficiency due to the formation of spaced vortices at the tips of the wings. None of the documents cited in the search report could suggest the importance of this specific distance, so that claim 1 as non-obvious alternative fulfills the conditions of Article 33(2) and 33(3) PCT. The industrial applicability is evident (Article 33(4) PCT).
